

Enviroscape – Watershed Model

The Enviroscape is a watershed model that provides an interactive learning experience on stormwater, land use, and pollution prevention concepts. From this model, participants will be able to visualize while learning what a watershed is, how the landscape and human activities influence water flow, as well as identify sources of pollution and threats to water quality. Participants of all ages will enjoy this opportunity for a hands-on experience of stormwater education. The county has two watershed models that can be loaned for free. Please contact us at swq@adcogov.org to make a reservation.
